

Air Brake Line BDAR Kit

Battlefield Damage Assessment and Repair Kit

- A.D.A. Supplies' Research and Development Team prides themselves on cutting edge support and products that benefit our Warfighters. We've developed a BDAR kit that is comprised of DOT approved components for the temporary repair of Air Lines within the field.
- This kit can repair 1/4", 3/8", and 1/2" airlines in a matter of minutes. The included couplers support all types of pre-existing air line systems to facilitate an expedited repair and recovery to get the Warfighter back in the fight. These connectors are fail proof and fail safe unlike other "push to lock" connectors that can fail at the slightest of bumps / tugs.
- This kit includes everything needed to make a field repair, and you can customize it to contain components for the aforementioned sizes and also for Straight, 45 degree and 90 Degree elbows. These temporary repairs can be easily disassembled once the Warfighter is out of harms way and be reused for future situations. This allows for equipment to be inspected and repaired to TM / TO specs rapidly and efficiently
- ADA Supplies' Air Brake Line BDAR (Battlefield Damage Assessment and Repair Kit. Another one of ADA Supplies' cutting-edge products, part of our exponentially growing GCSS / GRE program.
